

Where each component fits

Application / Containers
Write logs to stdout, files, or a logging driver

↓

Fluent Bit
Collects, parses, enriches and buffers logs

↓

Google Cloud Logging API
`entries.write` receives log entries from Fluent Bit's Google Cloud output plugin

↓

Cloud Logging service — Log Router
Evaluates routing destinations and exclusion filters

Log storage
Default or other log buckets

Excluded logs
Not stored by that destination

Log-based metrics → Cloud Monitoring
Metrics can be used for dashboards and alerting. They are not a separate log-ingestion step.
